

Epic Laser Dentistry™

Epic Laser Dentistry™ is one of the most advanced dental treatments today. Epic uses unique technology that combines focused light and thermal energy for a highly precise, exceptionally gentle dental experience.

NO ONE WANTS SURGERY

But when surgery is required, conventional treatments, utilizing a scalpel and stitches can cause a great degree of discomfort.

Epic laser treatments provide patients with greater comfort, less bleeding, faster healing and better clinical results¹ than conventional treatments.

You deserve better dentistry.

Benefits of Epic Laser Dentistry

Epic Laser Dentistry allows your dentist to perform a wide range of procedures with benefits including:

- ✦ Faster healing time and less trauma to gums.
- ✦ Less anesthetic for most procedures.
- ✦ Less post-operative discomfort.
- ✦ Making dental care a more relaxing experience for you.

What treatments can the Epic Laser do?

FIX "TONGUE TIE" OR PREVENT GUM RECESSIO

Tissue connections that restrict the movement of your tongue affecting your speech, a child's ability to feed or cause gum recession can be "released" with the Epic laser¹. Patients who choose Epic will also experience less bleeding and a reduced need for anesthetic or sutures in many cases¹.

IMPROVE "GUMMY" SMILE

With Epic, it is possible to improve the appearance of your smile by shaping the gums, known as laser soft tissue gingival contouring². The laser safely removes excess gum tissue that may give you a "gummy" smile, or makes your front teeth appear irregular in size or shape.

REMOVE GROWTHS

The Epic laser system may be used to remove small "tags" called papillomas and growths called fibromas, that result from cheek or tongue traumatic bite.

	Conventional Treatment (Scalpel & Sutures)	Epic Laser Treatment ¹ (Light & Energy)
During the Procedure	Local anesthetic with needle and shot is required to prevent pain. Bleeding is common.	Many procedures only require topical anesthetic. Bleeding is reduced or lessened.
After the Procedure	Post-operative stitches and prescription pain medication are usually required.	Reduces post-operative pain and the need for prescription pain medication. In most cases, no stitches are required.
Recovery	Recovery time may take 6-8 weeks, as prolonged healing time and discomfort are often experienced.	Recovery time is shortened. Minimal or reduced discomfort is experienced.
